alkady.dev github.com/Phoenix-H22

Summary

Full-stack Software Engineer with production Generative AI experience, including an Arabic analytics assistant built with OpenAI and Gemini. Strong in Laravel/PHP and Node.js, with experience in Python, Django, Vue.js, and React. Owns application delivery, deployment, and production support, with hands-on LLM integration, prompt refinement, and inference-cost optimization. Available with one week's notice; open to hybrid work.

Skills

Data & Infrastructure
MySQL, PostgreSQL, Redis, Query Optimization, Docker, Linux, Nginx, Supervisor, CI/CD, GitHub Actions

Backend & Architecture
REST APIs, Webhooks, Queues / Background Jobs, Multi-Tenant Architecture, System Design, OOP, SOLID, API Integrations

Full-Stack Engineering
PHP, Laravel, Node.js, Express.js, Python, Django, JavaScript, Vue.js, React, Next.js, Livewire, Filament

AI & Document Processing
OpenAI, Gemini, LLM Integration, Prompt Engineering, Context Management, Cost Optimization, SSE, OCR

Professional Experience

Software Engineer — Aug 2026 – Present
Kayanac ERP (Earlier engagement: Mar 2025 – Jun 2025, Contract) — Remote, Egypt

- Develop ERP workflows across HR, payroll, CRM, attendance, transportation, and notifications after rejoining full-time in August 2026.
- During the March–June 2025 contract, delivered six integrated modules serving 2,000 employees, including biometric attendance, helping reduce operational errors by approximately 60%.

Software Engineer — Sep 2025 – Jun 2026
Theqah.sa (Earlier engagement: Aug 2024 – Feb 2025) — Riyadh, Saudi Arabia

- AI Photo Station: Integrated backend services, Python components, and operational interfaces for an AI-powered photo product.
- Smart Lockers: Designed and delivered a multi-tenant control plane using Laravel, Python, MQTT, and Raspberry Pi, with secure APIs, queued commands, callbacks, retries, and diagnostics.
- Wasfaty: Built prescription-dispensing workflows used during Hajj season, covering external APIs, reconciliation, and failure recovery.
- Chocolate Vending: Connected payment transactions to physical dispensing and supported deployment, monitoring, and production operations.

Backend Software Engineer — Mar 2025 – Apr 2026
Mohssilh — Saudi Arabia

- Smart Analyst: Owned end-to-end development of a production Arabic analytics assistant using OpenAI and Gemini to answer merchant questions from store KPIs, orders, products, and customer data.
- Refined prompts and context selection to reduce inference costs and improve response quality; implemented SSE streaming, signed internal APIs, session tokens, and per-store rate limits.

- Developed a backend serving 200 registered merchants and 20K average monthly orders, with approximately SAR 12M in order value over 2–3 months.
- Improved Salla synchronization, queues, and reconciliation, reducing webhook failures to near zero and maintaining zero downtime over three months.

Software Engineer (Contract) Mar 2024 – May 2024
Tjar.sa (Multi-Tenant E-Commerce SaaS) Saudi Arabia

- Built tenant-aware Laravel/Livewire features for stores, orders, inventory, payments, and merchant workflows.
- Delivered responsive Tailwind interfaces with data isolation, integrations, validation, and production fixes.

Software Engineer (Contract) Sep 2023 – Mar 2024
KLLIQ LLC (AI SaaS Solutions) Khamis Mushait, Saudi Arabia

- Developed APIs and application features for SaaS, CRM, and social applications using Laravel, Vue.js, Python, and third-party services.
- Resolved backend and frontend defects, refactored legacy code, and delivered scoped releases with stakeholder feedback.

Software Engineer Egypt
Phoenix Tech's

- AI Document Processing: Built Laravel APIs and Vue.js interfaces combining native PDF extraction, Tesseract OCR, OpenAI-assisted text correction, background processing, and live progress updates.
- Warqah Store: Own backend and DevOps for a commerce platform with EGP 21M+ in sales, 100K+ orders, and 90K+ customers; manage payment/shipping integrations, deployments, monitoring, and incident recovery.
- NABD: Built and operate a Laravel/Node.js messaging SaaS processing 5,000+ messages weekly, with tenant isolation, queued delivery, retries, callbacks, and Salla/Zid integrations.
- Autopay EG: Built payment-confirmation workflows with concurrency-safe invoice matching, idempotent updates, background jobs, and signed webhooks.
- Your Obour Guide: Built a bilingual Flutter application integrated with Laravel APIs, covering local discovery, testing, and releases.

Education

Bachelor of Computers and Artificial Intelligence Sep 2021 – Aug 2025
Faculty of Computers and Artificial Intelligence, University of Sadat City Sadat City, Egypt

- Excellent with Honors; cumulative GPA: 3.47/4.0. Final-year GPA: 3.8/4.0.
- Graduation Project — Virtual Clinic / Dr. Robot (A+): Integrated Laravel, Flutter, Vue.js, Python, and Raspberry Pi with OpenAI-powered text/image conversations and stored conversation history.

Certificates

- ICSI | CNSS Certified Network Security Specialist
- Cyber Security Foundation Professional Certificate - CSFPC™
- Udacity / MCIT — Intro to Programming Nanodegree
- AWS Academy Cloud Foundations

Languages

- Arabic
- English
